3. Potassium nitrate is used in the production of fireworks, explosives, and matches. It is also used in curing foods and to modify the burning properties of tobacco. The reaction for the industrial production of KNO3 is summarized below. Determine the oxidation number for each atom, and decide whether the reaction is a redox reaction or not. If it is redox, identify which substance is oxidized, which substance is reduced, the oxidizing agent, and the reducing agent.

+1 -1 +1 +5 -2 0 +1 +5 -2 0 +1 -2 4 KCl + 4 HNO₃ + O₂ \rightarrow 4 KNO₃ + 2 Cl₂ + 2 H₂O Cl Oxidized: KCl reducing agent O Reduced: O₂ oxidizing agent

4. For each of the following equations, determine the oxidation number for each atom in the equation and identify whether the reaction is a redox reaction or not. If the reaction is redox, identify what is oxidized, what is reduced, the oxidizing agent, and the reducing agent.

+1 -1 -3 +1 -3 +1 -1 b. HCl(aq) + NH₃(aq) → NH₄Cl(aq)
